

291ddvd

The image shows a black and white schematic of a circuit board. The board is rectangular with four circular mounting holes at the corners. A complex network of lines represents the circuit traces. On the left side, there is a dense vertical stack of 10 circular pads, with several lines branching out from them. At the bottom, there is a horizontal row of 10 circular pads, with lines connecting them to the main circuit. The central area of the board is mostly empty, except for the text '291ddvd' which is oriented upside down. Various other pads and lines are scattered across the board, indicating a complex internal circuit design.
